

nanobox | lemondrop Quick Start Guide

GET SET UP

1. Insert the microSD card. The card must be in the slot for lemondrop to load. The card is spring-loaded. Push to eject when needed, but leave it in for now.
2. Connect the Line Out to your mixer, speakers or headphones.
3. Connect an optional MIDI controller to the MIDI IN jack. TRS Type A and B are supported.
4. Connect the USB power cable.
5. Play notes on the MIDI controller or the Grid Keyboard screen and you are making music!

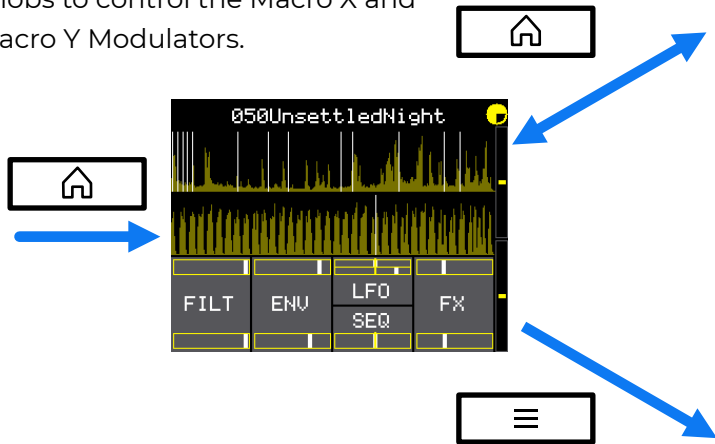

FIND YOUR WAY AROUND

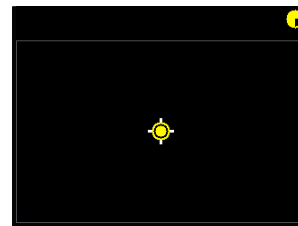

ACCESS THE DASHBOARD AND PERFORMANCE CONTROLS

DASHBOARD

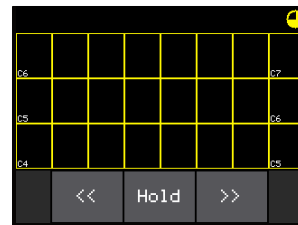

Watch the oscillators and controls react to Note Triggers. Touch the waves or a button to configure the related parameters. Turn the knobs to control the Macro X and Macro Y Modulators.

Performance Stack

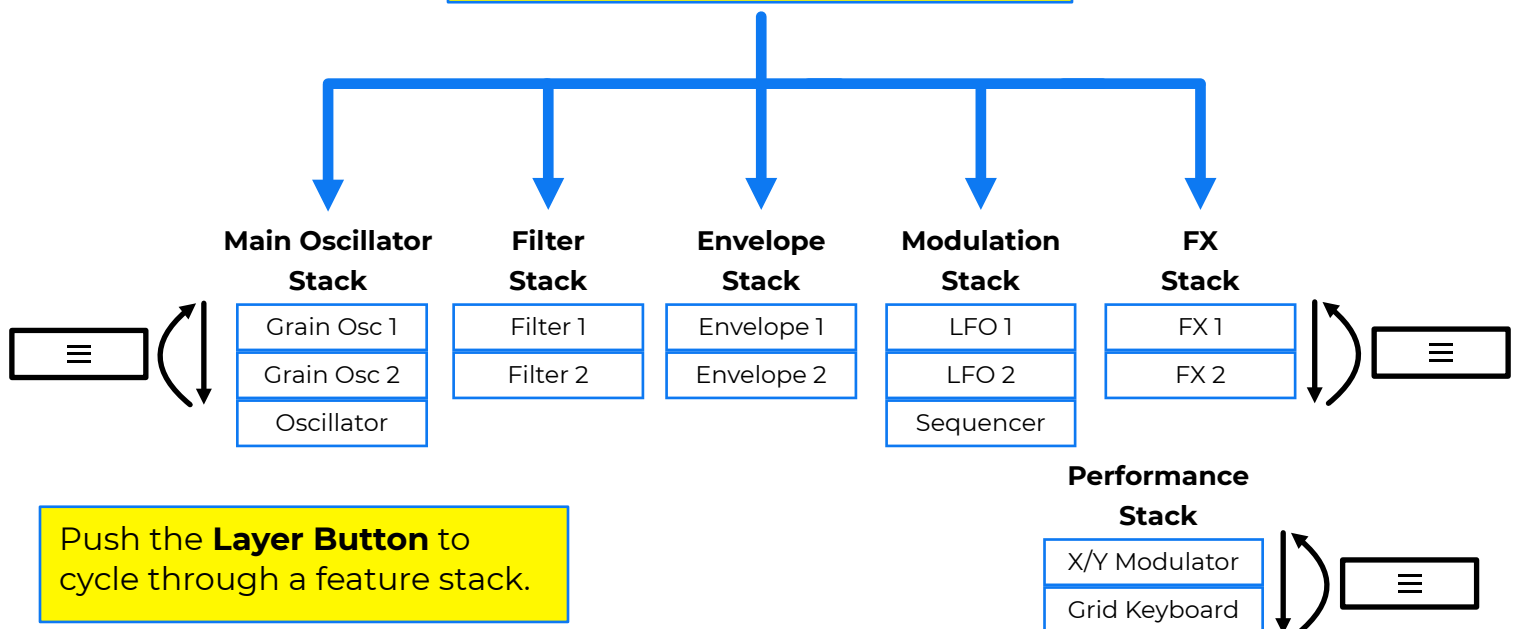

X/Y MODULATOR
Touch the screen and turn the knobs to adjust the sound in real time.

GRID KEYBOARD
Trigger notes by touching the grid. Touch the Hold button to use note toggle mode. Touch << or >> to change octaves. Push the Right Arrow to select the scale.

NAVIGATE THE STACKS

Touch the graphs or buttons on the Dashboard to access feature stacks.

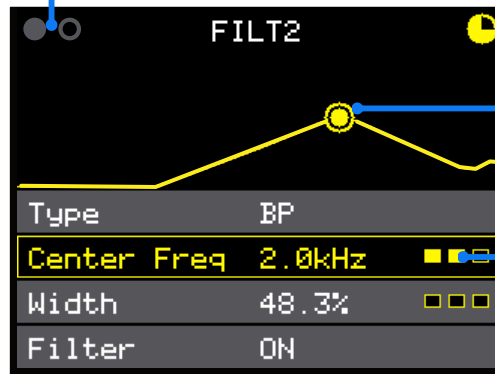

SET THE CONTROLS

Stack Position

See where you are in a stack.

Parameter List

Use the top knob to scroll through the list. Use the bottom knob to select a value.

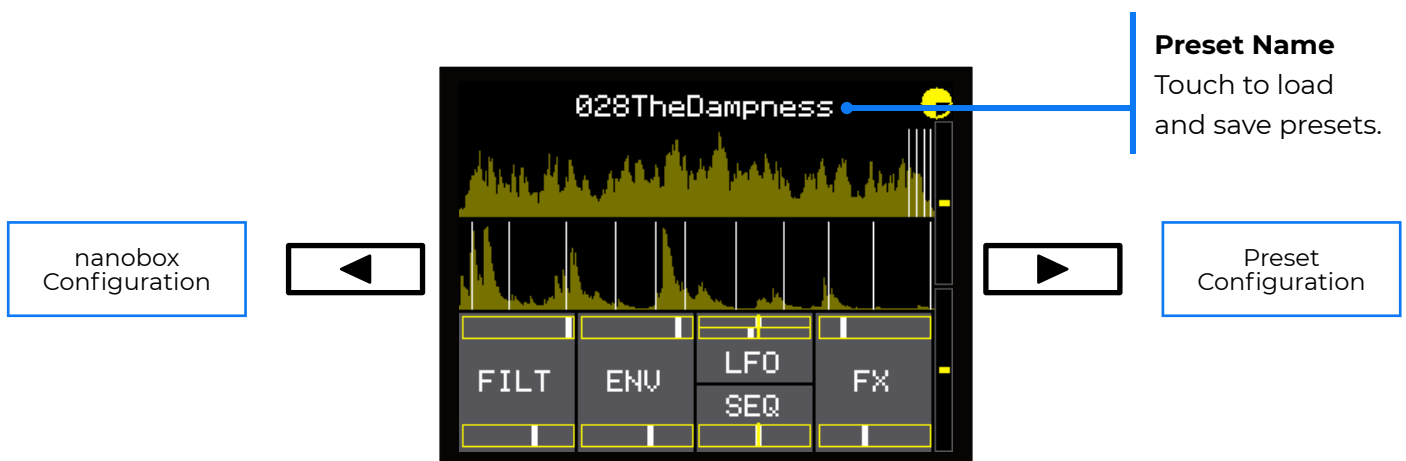

Graph

Drag the handle to adjust the settings.

Modulation Slots

Push the Right Arrow while row is selected to apply MIDI and Internal modulation.

ACCESS HIGH LEVEL CONFIGURATION OPTIONS

Push the **Left Arrow** and **Right Arrow** buttons from the Dashboard to configure settings at the nanobox level and at the preset level.

EXPLORE THE SOUNDS

- Try the Modulation Wheel on your MIDI Controller with different presets to add sometimes subtle, sometimes surprising effects.
- Turn the knobs on the dashboard and drag your finger on the X/Y Modulation Grid to explore how each preset uses the Macro X and Macro Y modulators.
- Set the Line Thru amount on the nanobox Configuration screen to control how much of the Line Input signal is sent to the FX engine.
- Set the Play Mode for a Grain Oscillator to Fixed and manually adjust the Play Pos parameter to find the sweet spots in your file.
- Use the Grid Keyboard to Hold the notes and hear the changes over time. Trigger multiple notes to hear how they interplay.
